

Physical Security Inspections

Physical security is the process of locking down the non-digital components of your business. This includes your inventory, premises, and company equipment. When you do not have adequate physical security, you risk breaches and theft that can cost your business thousands.

The Integrity Group's physical security evaluations will assist you to minimize adverse actions to your business while maintaining and exceeding regulatory mandates and requirements as well as provide best practice advice regarding physical security exposure.

What To Expect From A Physical Security Inspection

Every physical security inspection is unique. The specific process will differ depending on your business. For example, a distribution facility would have different security needs than a restaurant.

During a physical security inspection, our team of experts will evaluate your premises and make recommendations to improve your overall security.

During our Physical Security Evaluation, we offer:

- Security assessments- CCTV, Alarms, Access Control, Egress & Ingress, Workplace Violence, Active Shooter, De-escalation, etc.
- Security recommendations
- Vendor selection
- Employee background screening
- Ideal solutions to mitigate exposure
- Security policies and procedures and plans of action
- Develop standard operating procedures relative to security incidents
- Trend Analysis
- Cap Index- CRIMECAST data reports provide all the relevant crime risk data for your locations to support invaluable decision-making protocols based on objective, validated data.

The
Integrity Group

The Integrity Group provides a data-driven, and analytical approach to developing the right security package for every location, optimizing the right security resources based on risk, and ensuring you adopt a Risk-to-Resource mindset across your organization.
